Status: <i>Obligatory</i>		Contact hours: <i>60</i> <i>Lectures: 30</i> <i>Exercises: 30</i>	
Assigned professors and assistants:			
Prerequisites:	/		
Subject objectives:	<i>Acquiring knowledge about various endogenous geomorphological processes and forms developed in this process. Studying and learning about tectonic movements and their morphological significance, genesis and evolutionary classification of mountains, tectonic plates and global relief of the Earth and genesis of oceanic basins. Also, volcanic and seismic phenomena and forms will be studied. In conclusion, knowledge about the importance of endogenous landforms necessary for various socio-economic activities in the world and Bosnia and Herzegovina is acquired.</i>		
Teaching units:	<ol style="list-style-type: none"><i>1. Introduction</i><i>2. Endogenous forces and their geomorphological significance</i><i>3. Tectonic movements and forms</i><i>4. Tangential movements and forms</i><i>5. Tectogenesis of fold mountains and orogenic phases</i><i>6. Radial movements and forms</i><i>7. Tectogenesis of fault mountains</i><i>8. Partial exam</i><i>9.
